Introduction

Computer Science and Engineering student at IIIT Kalyani with a strong foundation in game development. Skilled in Unreal Engine and Unity, with experience creating gameplay systems, immersive environments, and interactive mechanics. Passionate about blending creativity with technology to deliver engaging player experiences.

Experience

Game Developer Intern, Jabsz Studios

Aug 2025 – Nov 2025

- Developed scalable gameplay and power-up systems in **UE5 (Blueprints)**, with modular actor components and replication support.
- Worked on **multiplayer gameplay**, ensuring reliable networked behavior and optimized system performance.
- Collaborated with a cross-functional team using **Git**, code reviews, and agile development workflows.

Projects

FrostFire | Unreal Engine 5

[Demo Video](#) | [Demo Playlist](#)

- Implemented **enemy AI** using **Behavior Trees** and **Environment Query System** for dynamic player detection and combat decision-making
- Designed **modular and scalable** gameplay components including **Weapon, Inventory, Interaction, Quest, and Stats (Health)** systems with **event-driven communication** between them
- Implemented FPS combat mechanics including **dynamic crosshair feedback** and **gameplay UI**

Cats-Teroids | Unity, Piskel

[Itch.io](#) | [Demo Video](#)

- Arcade-style reverse Asteroids featuring wave-based combat, enemy spawning systems, and object pooling for performance.
- Implemented progression systems, designed custom UI, **minimap** system, and responsive menus with strong visual juice using **post-processing** and animation.
- Created and integrated original sprites, audio, and VFX; focused on game feel and player feedback.
- Built modular gameplay systems with clean architecture and extensibility for future shaders and physics-based effects.

Custom 2D Game Engine | SFML

[2D Game Engine Github](#)

- Designed and implemented a modular **Entity-Component-System (ECS)** architecture from scratch.
- Developed core engine subsystems including **2D rendering pipeline, input handling, physics, collision detection, asset management, scene management, and serialization.**

Technologies

Languages: C++, C#, Java, Python, Kotlin, SQL, C

Game Engines & Frameworks: Unreal Engine 5, Blueprints (UE5), Unity, SFML, OpenGL, Dear ImGui, GLM

Tools & Databases: Git, Visual Studio, Jetpack Compose, MySQL, SQLite, SQLAlchemy, Flask

Education

Indian Institute Of Information Technology Kalyani, B.Tech in Computer Science and Engineering
CGPA: 8.5/10 (till 5th semester)

Aug 2023 – May 2027

National Gems Higher Secondary School, Higher Secondary
ISC: 95.2% | ICSE: 93.3%

Apr 2007 – Jun 2022

Certificates

Unreal Engine 5: The Complete Beginner's Course – David Nixon, Udemy (2024)

Unreal Engine 5: The Intermediate Course – David Nixon, Udemy (2024)
